## Amendments to the Claims:

Claims 1 and 35-37 are currently pending with claims 1 and 36 having been amended. This listing of claims will replace all prior versions, and listings of claims in the application:

## **Listing of Claims:**

(Currently amended) Apparatus for accessing content contained on a 1 1. storage medium, the content including a plurality of programs such that each program includes a 2 plurality of scenes and each scene includes a plurality of frames, the programs and the scenes 3 include information for moving pictures, the apparatus comprising: 4 a driver module configured to access the content and having a driver output to 5 6 produce an information signal for the accessed content; a decoder module operatively coupled to the driver module to receive the 7 8 information signal; 9 a user input module configured to receive user input with at least a select button 10 and/or a cursor button; and a system control module configured to control, the driver and decoder modules to 11 produce a first display signal for the plurality of programs, each of the programs being 12 represented by a single frame in the first display signal, at least these single frames for the 13 plurality of programs are configured to be displayed on a display module based on the first 14 15 display signal, wherein the system control module, in response to receiving a user-specified 16 program selection from the select button is configured to control the decoder module to produce 17 a second display signal for the plurality of scenes, each of the scenes being represented by a 18 single frame in the second display signal, at least these single frames for the plurality of scenes 19 are configured to be displayed on a display module based on the second display signal, and 20 wherein the system control module, in response to receiving a user-specified 21 22 program selection from the cursor button, is configured to control the decoder module to play

back automatically the selected program as a small frame if there is no button input for a select period of time.

## 2 - 34. (Canceled)

- 35. (Previously presented) The apparatus of claim 1, wherein playback is performed as skipping playback or as fast-forward playback.
- 36. (Currently amended) Apparatus for accessing content contained on a storage medium, the content includes a plurality of programs such that each program includes a plurality of scenes such that each scene includes a plurality of frames, the programs and the scenes include moving pictures, the apparatus comprising:
  - a driver module configured to access the content and having a driver output configured to produce an information signal for the accessed content;
  - a decoder module operatively coupled to the driver module to receive the information signal;
    - a user input module configured to receive user input with at least a selection button or a cursor button; and

a system control module configured to control the driver module and the decoder module to produce a first display signal for the plural plurality of programs, each of the programs being represented by a single frame in the first display signal, at least these single frames for the plurality of programs are configured to be displayed on a display module based on the first display signal,

wherein the system control module, in response to receiving a user-specified program selection from the select selection button, controls the decoder module to produce a second display signal for the plurality of scenes, each of the scenes being represented by a single frame in the second display signal, at least these single frames for the plurality of scenes are configured to be displayed on a display module based on the second display signal, and

wherein the system control module, in response to receiving a user-specified scene selection from the cursor button, is configured to the decoder module to play back
